Problem Statistics: Need for Drug Safety Misuse of Prescription Drugs

Americans use prescription drugs

Source: Network for Excellence in Health Innovation (NEIH)

Prescriptions per year that are never picked up

Source: CVS Pharmacies based on 2008 data

Don't take medicines as prescribed

Source: NEIH

Americans die every year as a result

Source: Research cited by the then-US surgeon general in 2012

Problem Statistics: Need for Drug Safety Opioids Use Disorder

Patients prescribed opioids for chronic pain misuse them.

Develop an opioid use disorder.

Misuse prescription opioids transition to heroin.

People who use heroin first misused prescription opioids.

Opioid overdoses increased from July 2016 through September 2017 in 52 areas in 45 states.

The Midwestern region saw opioid overdoses increase from July 2016 through September 2017.

Opioid overdoses in large cities increase in 16 states.

Adverse Medication Event

Precise Software is doing just that. Correctly identifying a pill based on its physical appearance is crucial for a patient to address medication safety concerns. Color, shape, and imprint uniquely identify a pill, including its name, dosage, and black box warning. Using Google AutoML Vision technology, Precise developed an advanced solution to recognize a pill from pictures taken on a mobile phone. This led us to develop PillSafe, a mobile app that leverages this ML technology solution to promote awareness of pills a patient is taking. The goal of PillSafe is to improve healthcare by streamlining the factors that contribute to public health, wellness, and awareness.

An adverse drug event (ADE) is an injury resulting from medical intervention related to a drug.¹ This includes medication errors, adverse drug reactions, allergic reactions, and overdoses. The good news is that large majority of ADEs are preventable. Reducing ADEs is expected to result in safer and higher quality health care services, reduced health care costs, more informed and engaged consumers, and improved health outcomes.*

Adverse Event Alert

Initiates AE alerts by analysing user inputs and prevents escalation of incidents by enabling immediate rescue response.

Opioid Use Disorder

Precise Software is doing just that. Correctly identifying a pill based on its physical appearance is crucial for a patient to address medication safety concerns. Color, shape, and imprint uniquely identify a pill, including its name, dosage, and black box warning. Using Google AutoML Vision technology, Precise developed an advanced solution to recognize a pill from pictures taken on a mobile phone. This led us to develop PillSafe, a mobile app that leverages this ML technology solution to promote awareness of pills a patient is taking. The goal of PillSafe is to improve healthcare by streamlining the factors that contribute to public health, wellness, and awareness.

Opioid use is habit-forming, especially when opioids are not taken as prescribed. Opioid addiction can be described using three basic components:

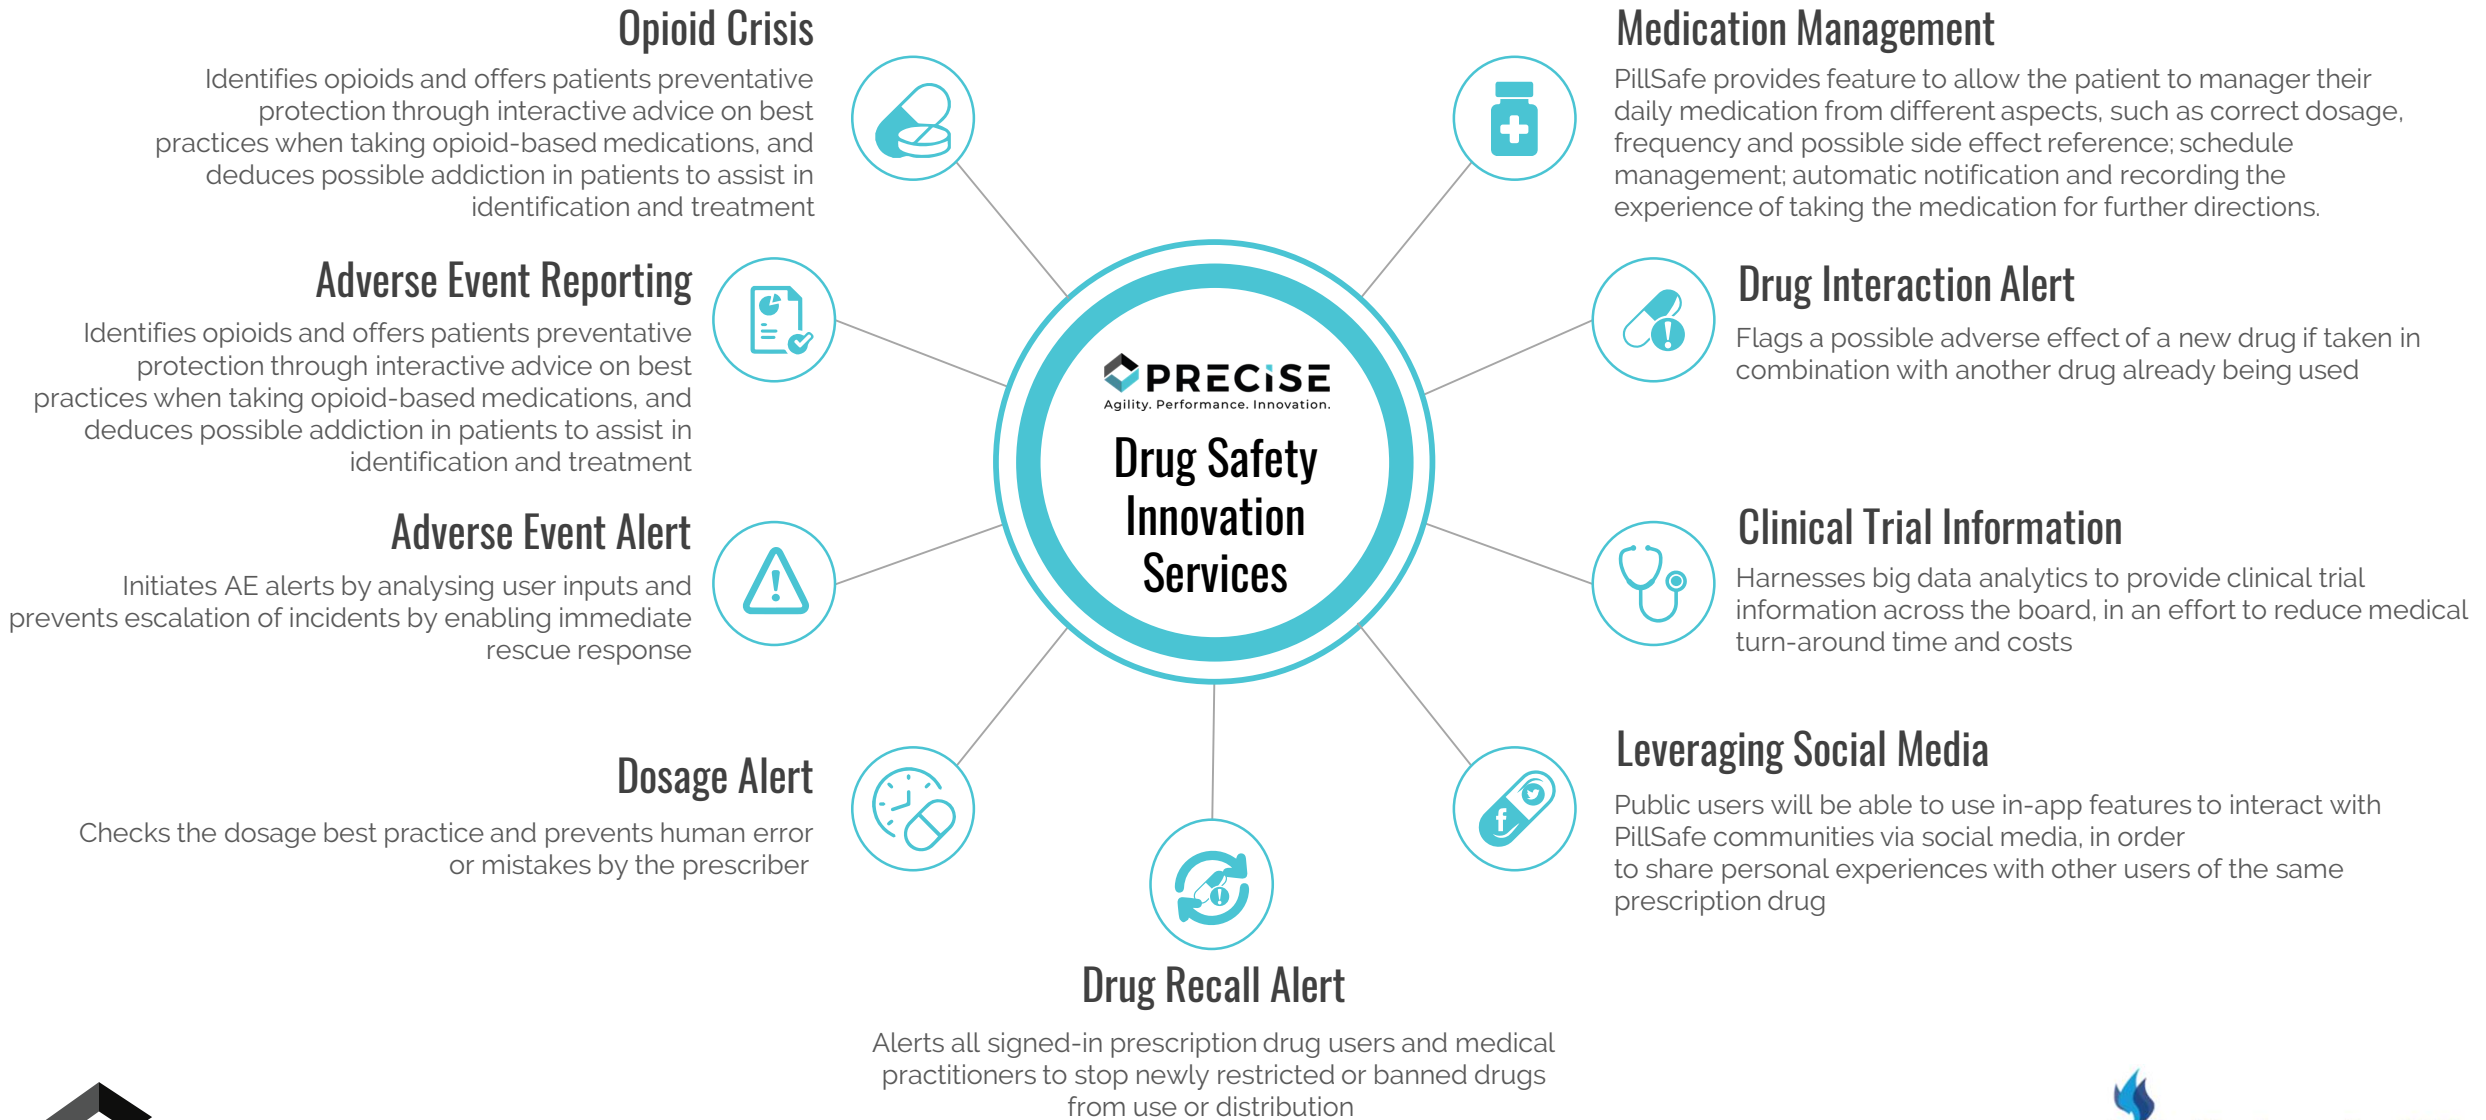

- ✓ Overwhelming psychological desire to use opioids
- ✓ Increased tolerance to opioids
- ✓ Withdrawal symptoms when opioids are unavailable

*<https://health.gov/hcq/ade.asp>

Opioid Crisis

Identifies opioids and offers patients preventative protection through interactive advice on best practices when taking opioid-based medications, and deduces possible addiction in patients to assist in identification and treatment.

PillSafe Drug Safety for Better Health, Better Live

Google Cloud AutoML for Better Health, Saving Lives

AutoML Vision ^{BETA}

Start with as little as a few dozen photographic samples, and Cloud AutoML will do the rest.

AutoML Natural Language ^{BETA}

Automatically predicts text categories through either single or multi-label classification.

AutoML Translation ^{BETA}

Upload translated language pairs to train your own custom model.

Dataset

AutoML

Generate Predictions with a rest API

Train

Deploy

Serve

We leverage Google Platform products to enable our developers to train our models using Google's high-tech transfer learning and Neural Architecture Search technology. We leverage machine learning, image recognition, sentiment analysis, and predictive analytics within the PillSafe app

Training with Google AutoML Vision Platform for Drug Safety

The screenshot shows the 'IMAGES' tab in the AutoML Vision interface. On the left, there is a table with the following data:

Image ID	Count
All images	10300
Labeled	10300
Unlabeled	0

Below the table is a grid of pill images. A 'Select all images' checkbox is checked. The grid contains two rows of four pill images each, all labeled 'pill_966247'.

Step1: Prepare images

The screenshot shows the 'TRAIN' tab in the AutoML Vision interface. The 'Models' section is visible, and the 'TRAIN NEW MODEL' button is highlighted with a red box.

Step2: Train model

The screenshot shows the 'PREDICT' tab in the AutoML Vision interface. It displays three pill images with their predicted labels and confidence scores:

- Image 1: A white pill with 'M364' on it. Prediction: pill_856892, Confidence: 0.975.
- Image 2: An orange pill with a red 'U' on it. Prediction: pill_210673, Confidence: 0.975.
- Image 3: A yellow pill with 'BMS 250 mg' and '6673' on it. Prediction: (empty), Confidence: (empty).

Step2: Predict

Innovation Alignment In Every Solution for Better Health

IT Modernization and Digitalization

PillSafe is an AI-powered cloud-based platform. It incorporates the most advanced technologies in machine learning, neural networks and search based algorithms to give stakeholders very personalized and effective solutions to medical care.

Data, Accountability and Transparency

Our system incorporates advanced data filtering and authorization capabilities to enable accountable data mining and enable effective decision making for healthcare.

Improving Customer Experience

Our intended features solve many pains that patients, medical practitioners and the regulatory bodies have had in the past in the field of medical care. But the most important aspect will be that of empowering drug users to know the impact of their actions on their health.

Sharing Quality Services

It is the desire of every person to access the best medical attention possible. Through our analysis of cause and effect in medical care, we will be able to provide people with information about which medical services are serving similar cases best.

Improving Transfer of Federally-Funded Technologies

The US Government has funded a lot of research into technologies that could benefit its citizens, especially in the medical sector. We will blend these technologies into our solution, even as we strive to lead the way in showing other businesses how they can leverage these technologies for other use cases for better products and services in all sectors.

ABOUT PRECISE

Precise Software Solutions, Inc. (Precise) is a nimble and fast-growing SBA 8(a) certified small business focusing on strategy and IT consulting services to public sector customers. We are proud of our strong reputation for overcoming obstacles and delivering innovative, quality work with measurable results. For detail information, please visit us at www.precise-soft.com
